- FAMI Cabinet with "Clearview" Doors. 2 panels, 1 shelf 480mm deep & 3 normal extension drawers (Hooks & Tools Excl)
- Cabinet Weight Load Capacity 800kg
- Drawer Weight Load Capacity 50kg
- Shelf Weight Load Capacity 50kg

HITACHI RAIL STAY ON-TRACK WITH SYSTEM STORE SOLUTIONS

When HITACHI Rail was looking for the most efficient storage solution for its new Ashford depot, the best offer was right on their doorstep.

As the depot is brand new, it required a complete storage and work bench installation that would accommodate the tools and machinery required for the depot to function. The storage facility needed to be innovative, user-friendly and secure, plus in some cases the work benches and tool cupboards needed to be mobile to allow engineers to move parts and tools easily around the facility.

With System Store Solutions Ltd a stones throw away from the new depot, they were quickly called in to design a storage solution for the new

facility. "It was clear from the initial discussion that System Store Solutions were the right company for us", says Jason Andrews, technical trainer and support engineer for Hitachi Rail Maintenance (UK) Ltd. "They pin-pointed our requirements extremely accurately at the design stages and I was equally impressed with the professionalism and the quality of workmanship. The product, the installation and the overall service was excellent".

The installation consisted of fixed and mobile work benches plus free standing tool cupboards fitted with high-visibility polycarbonate doors for storing tools, components and equipment. The hi-vis secure system saves time when tool tracking as now cabinets can be visually inspected without opening them.

The brand new depots' primary role is to maintain the class 395 high speed "Javelin" trains, which are currently in their testing phase. As well as maintaining the 395, the new depot, based in Ashford Kent will also be responsible for replacing South Eastern traction packs on the class 465.

"Another fantastic feature offered for tool storage was the plastazote foam tool inserts equipped with an easy user ID tagging system", adds Jason. "This new facility not only kept our tools neat and tidy, but also created a speedy system for tracking down who was using what tool or tools at any one time.

This in combination with the high visibility polycarbonate doors made tool tracking problems a thing of the past.

No more wandering up and down the depot trying to find out who has a tool that you need. The new system tells you instantly.

I would have no hesitation in recommending System Store Solutions and will definitely be calling on their expertise for future projects".

System Store Solutions specialises in the total design, layout and installation of rail maintenance workshops and sheds, as well as providing a range of innovative storage products designed specifically for the rail industry.

The company is the exclusive UK distributor of the Fami storage, workshop and transportation systems product range. Its success is founded on the expertise of its consultants and based on project management, consultation and technical advice.

Editors Notes

Dear Readers,

Welcome to the System Store Solutions On-Track newsletter, bringing you the latest news in storage and workshop solutions for the Railway industry.

In this issue we discuss storage installations that System Store Solutions has implemented for some of the biggest names in the industry such as Alstom and Hitachi Rail.

We also discuss our vast range of innovative products offering both high security and high visibility, creating an easy, user-friendly working environment for our customers.

Within the "what's in store" section we have quality products on offer at fantastic prices. These offers are specifically for On-Track readers so please don't miss out on these great products.

System Store Solutions will be exhibiting at Railtex 2009 held at London Earls Court 2, 10th - 12th March 2009. This will be our first exhibition at this event so please visit us on stand 167. We look forward to seeing you at the show.

ALSTOM and System Store create the "Pit Stop" storage standard

To accommodate its new "Pit Stop maintenance" program, which has been put in place to improve the availability of trains to Virgin for its new improved timetable, Alstom looked to System Store Solutions Ltd to provide the perfect storage facility for its West Coast depots.

The "Pit Stop maintenance program" forms part of the new Alstom initiative to improve the performance of the trains on the West Coast Main Line for Virgin Trains. Its focus has been on the areas of reliability and improving the efficiency of maintenance on the trains - in other words, to get an entire job done during downtime.

System Store Solutions was initially tasked to re-fit the Wolverhampton depot. One of Alstom's award winning West Coast sister depots, winning a National award for innovative maintenance control processes. The key requirement from Alstom was for System Store Solutions to design a solution that would provide tools at trackside for easy access in a clean work environment.

David Price, managing director of System Store Solutions' design for the new installation

included high visibility leaf door free standing tool cupboards with perforated back panels so tooling could be hung at the back of the unit, yet be easily visible to the user, due to the innovative system.

"Fitted with tough transparent polycarbonate leaf doors for storing items such as tools, components and equipment, the high-visibility system will ease the time consuming process of tool tracking as now cabinets can be visually inspected with ease", says David. "These new, extremely durable cabinets are in direct response to customer feedback".

Workbenches were provided with laminate work tops plus pedestal cabinets for storage. Also provided were secure computer cabinets, specifically designed to protect PCs and terminals from damage.

"System Store has provided us with a well manufactured and presentable system", says Paul Crowley, lead buyer for Alstom. "The design and the installation were both handled extremely professionally providing us with a storage system that can easily be expanded on if required in the near future", adds Paul. "Our key requirement has been achieved, providing a facility that allows the engineers

System Store Solutions provided us with a well manufactured and presentable system.

easy access to trackside tools without the need for long, time consuming walks to and throw greatly reducing downtime".

As one of the most innovative storage consultants and suppliers in the UK, System Store Solutions Ltd can make any application requirement possible. The company is the exclusive UK distributor of the Fami storage systems product range. Its success is founded on the expertise of its consultants and based on project management, consultation and technical advice.

System Store Solutions has now secured a two year purchase agreement with Alstom and the installation provided at Wolverhampton has now become the company standard for the Alstom "Pit Stop maintenance" program. A further order has been secured at Alstom's Wembley depot for cabinets and other storage items from System Stores' product range.

INNOVATION IN STORAGE

System Store Solutions supplies high quality workshop and industrial storage equipment for the Rail, Engineering, Aerospace, Motorsport and Warehousing sectors.

The company has a full range of quality products, including its innovative and highly flexible modular workstations which are extremely multi-functional. The workstations can be made up of 2 & 3 compartment housings ready to receive drawers, cupboards or shelves dependent on our customers design preference.

Heavy-duty Multiplex ply worktops that can carry up to 2000kg loads are also available. Rear perforated back panels can be added to accommodate the storage of tools and components, if required lighting, monitor swivel arms, power panelling and container shelves can be incorporated in the final solution. Whatever the application, these versatile units will stand up to any storage challenge

Another great optional addition to this already versatile product is our Plastazote foam tool inserts equipped with an easy user ID tagging system (pictured here). This innovative facility not only keeps your tools neat and tidy as the foam is cut out to allow each individual tool to fit perfectly within the foam unit; but also creates a speedy system for tracking down who is using what tool or tools at any one time. This fantastic product from System Store Solutions makes tool tracking virtually a thing of the past.

System Store Solutions specialises in the total design, layout and installation of rail maintenance workshops and sheds, as well as providing a range of innovative storage and workshop products designed specifically for the rail industry. These include stand-alone workstations, drawer cabinets, mobile storage units, workbenches, trolleys, transportation systems, containers and shelving & racking for workshops.

System Store Solutions Ltd is highly visible

System Store Solutions Ltd has introduced a new innovative product line to its extensive family of storage equipment for industry. The new secure storage solution on offer is a range of cabinets, fitted with high-visibility polycarbonate doors for storing tools, components and equipment.

This new high-visibility system will ease the time consuming process of tool tracking as now cabinets can be visually inspected with ease. These new, extremely durable cabinets are in direct response to customer feedback.

"The need to safeguard valuable items, whether they are tools, valuable components or costly shop-floor consumables, is growing all the time," said System Store Solutions director, David Price.

Written by David Price

"We are constantly tuned in to our customers needs and pride ourselves on delivering the right solution for every requirement."

As one of the most innovative storage consultants and suppliers in the UK, System Store Solutions makes any application requirement possible. Its product range is manufactured in Italy, by market leader FAMI, and is amongst the widest in the storage sector.

This product is available in a number of formats to suit any application. For more information on our new range of Hi-visibility cabinets call us now for a free consultation from one of our expert advisors.
